

# CELSIUS Talk: New approaches to understanding and evaluating the risks in district heating investments

---

## Welcome to one of the CELSIUS webinars!

This webinar talks about the financial risks associated with district heating investments, based on Barcelona's DistriClima experience. It also explores the difficulties of integrating these risks into conventional "return on investment" and "cash-flow" analysis due to the specific limitations of simple methods of discounting.

## The recording

## The presentations

---

### **New approaches in understanding the risks in DH investments**

*Juan Alfonso de Molina*, Former President of DistriClima Barcelona
